

The Simulation Experiment Description Markup Language

Frank T. Bergmann & Dagmar Waltemath

SBML & BioModels Hackathon, Seattle 2010

MOTIVATION

Motivation

Chaos and Birhythmicity in a Model for Circadian Oscillations of the PER and TIM Proteins in *Drosophila*

JEAN-CHRISTOPHE LELOUP AND ALBERT GOLDBETER*

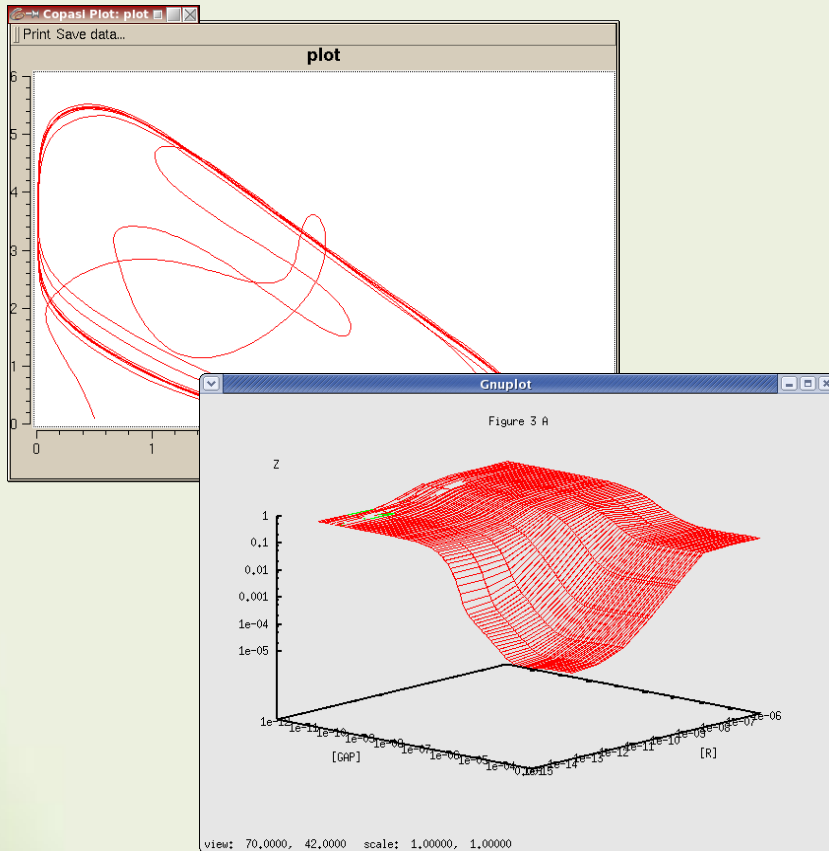

J. theor. Biol. (1999) **198**, 445-459

Article No. jtbi.1999.0924, available online at <http://www.idealibrary.com>

Motivation

BM 22

BM 86

- Changes in model parameterization
- Use of a number of different models in one experiment
- Choice of correct simulation algorithm
- Post-processing of the result data, e.g. normalization, logarithmic scale ...

HOW DOES SED-ML HELP?

Repeatable simulation experiments

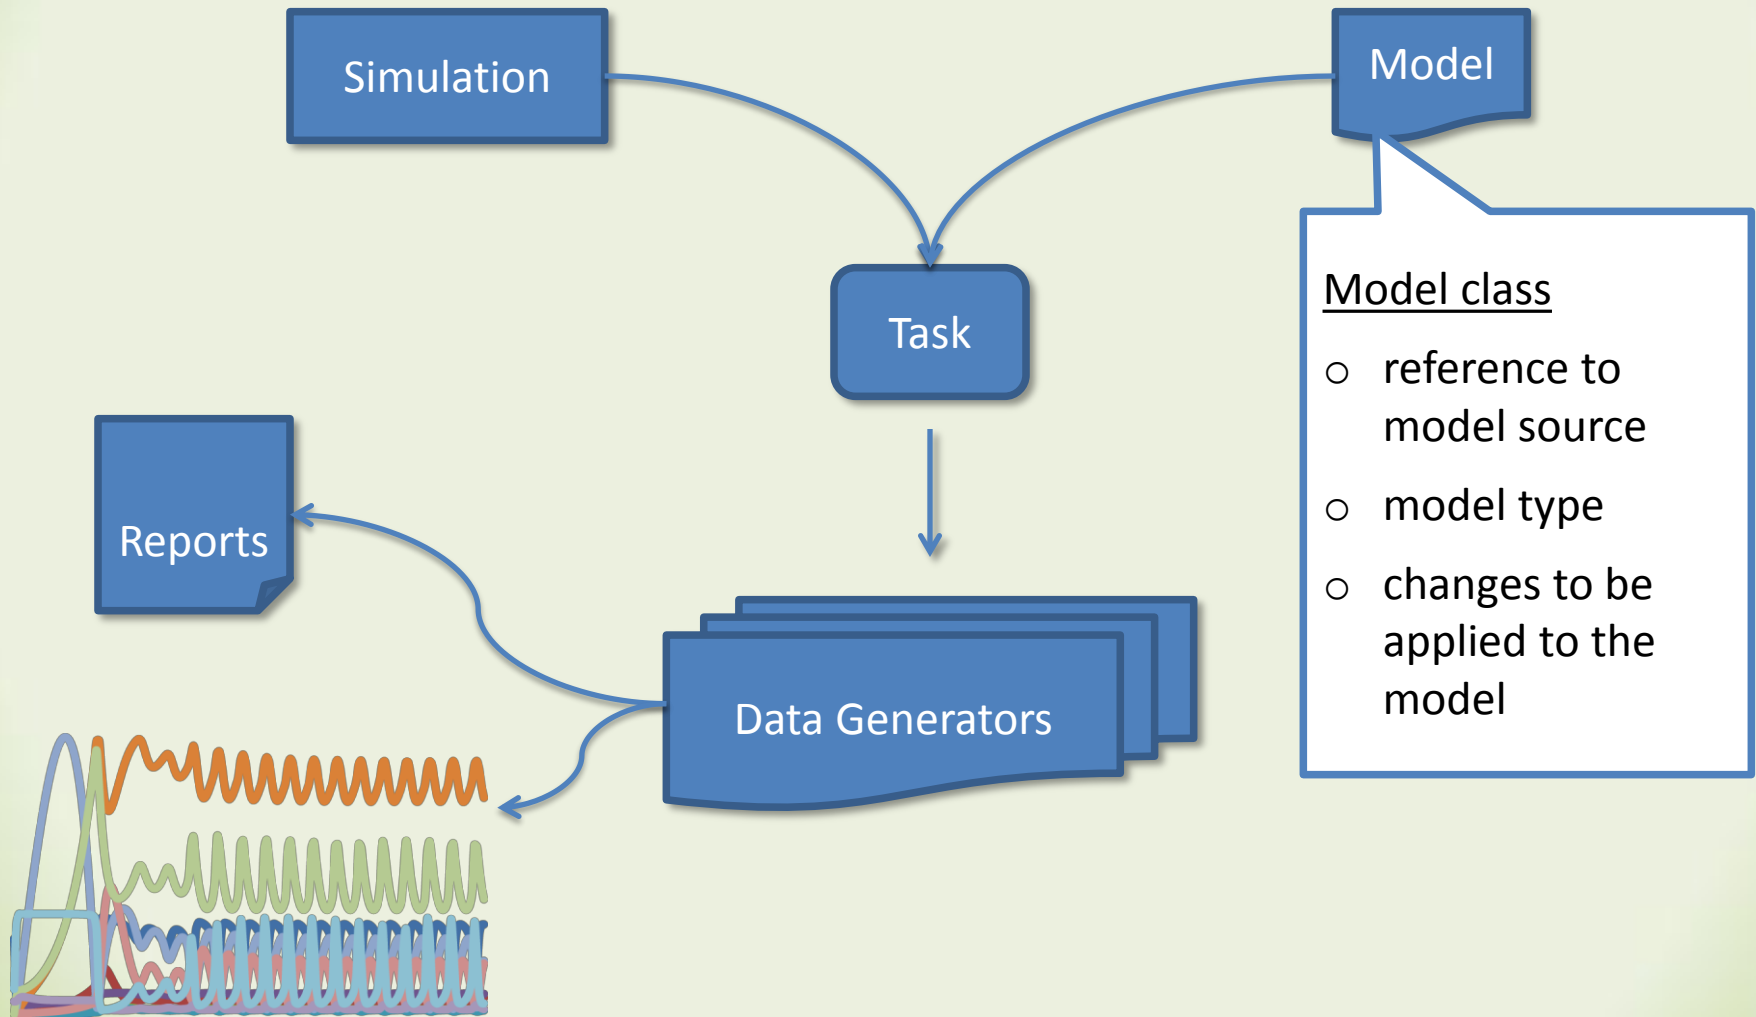

Simulation Experiment Description – Markup Language (SED-ML):

Is a language that aims to standardize the exchange of simulation experiments, independently from the model description language and the simulation tool.

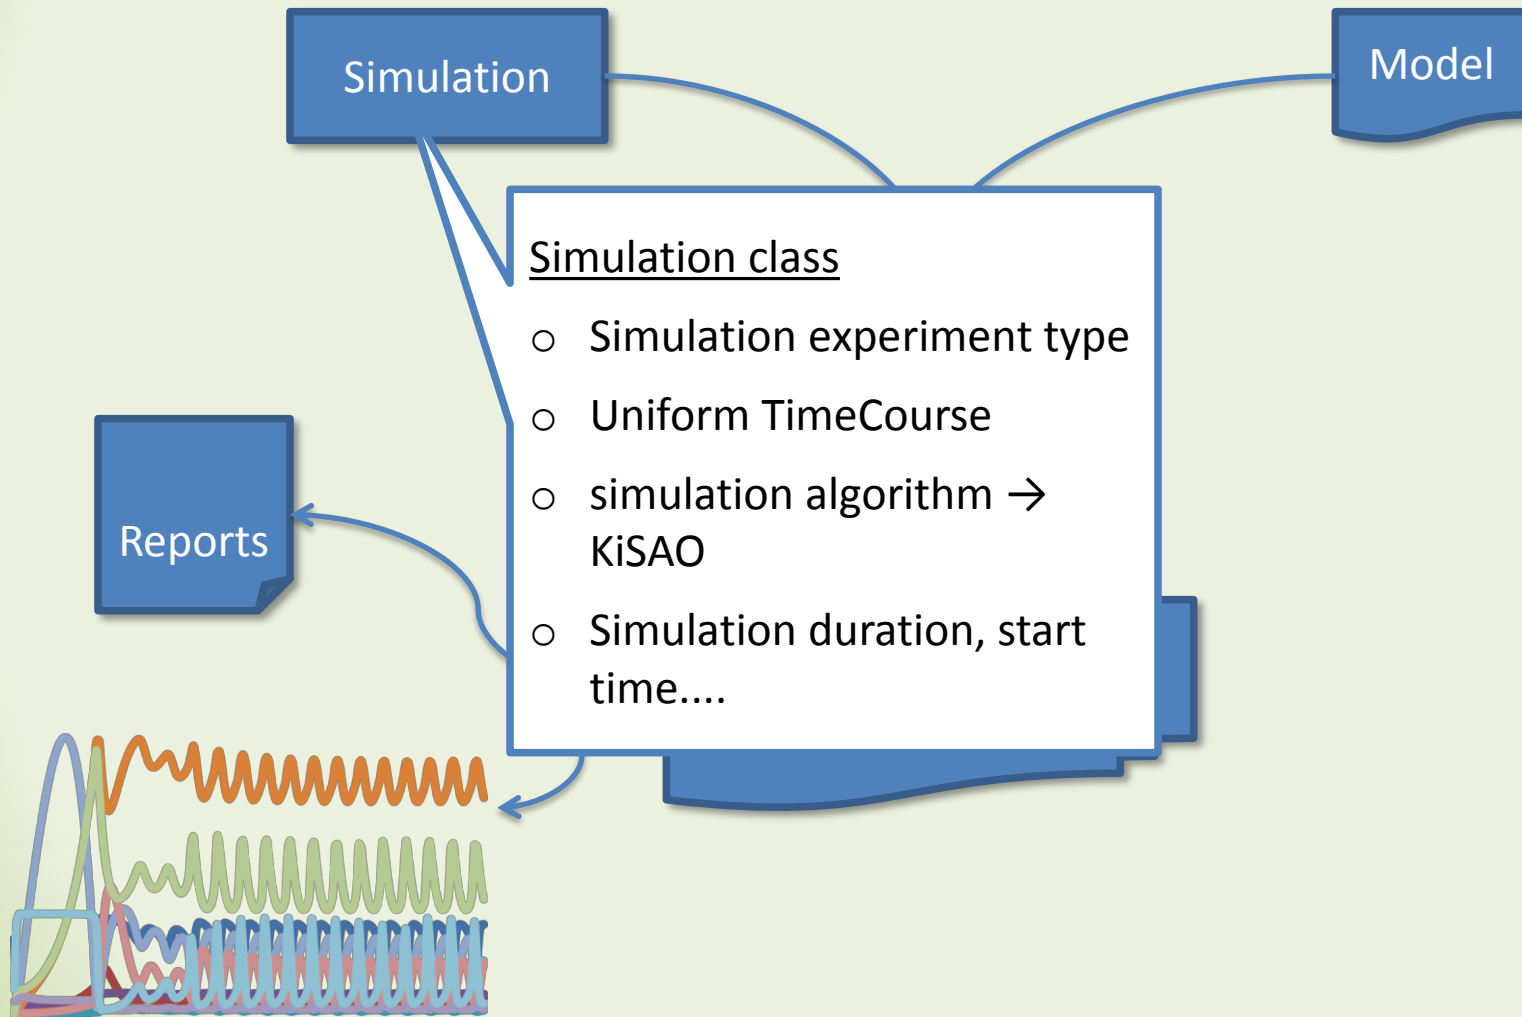

Repeatable simulation experiments

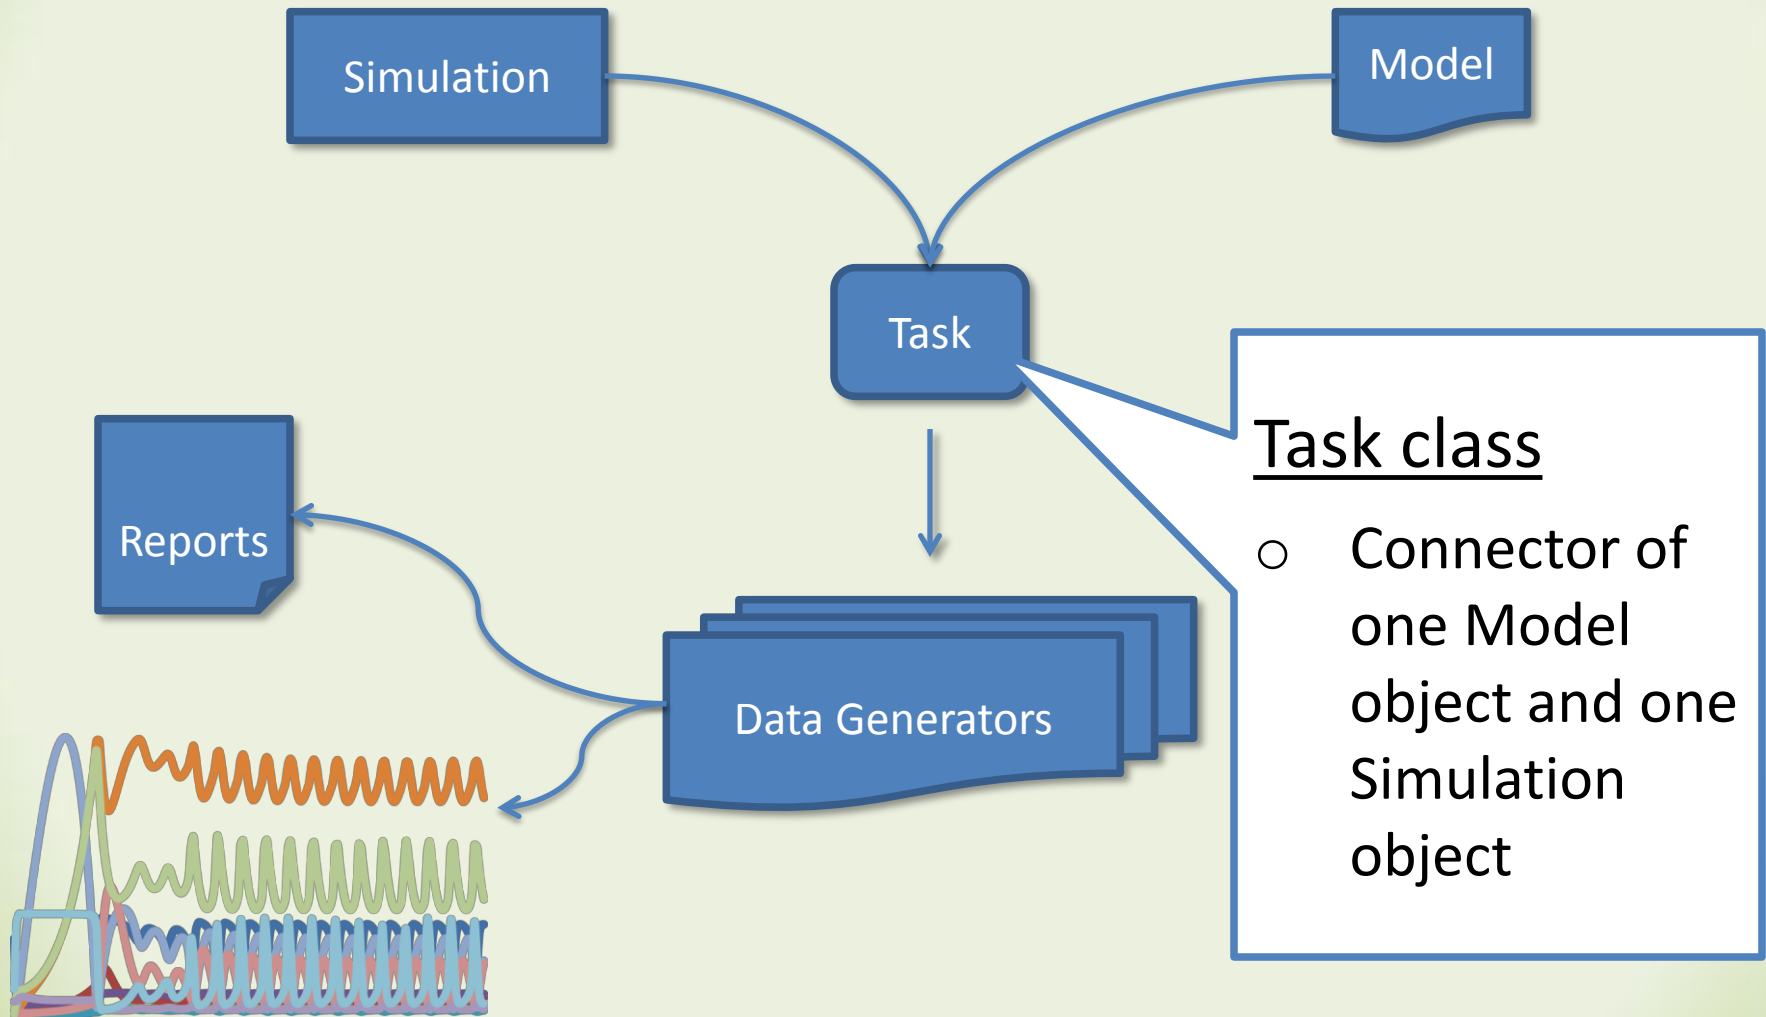

Repeatable simulation experiments

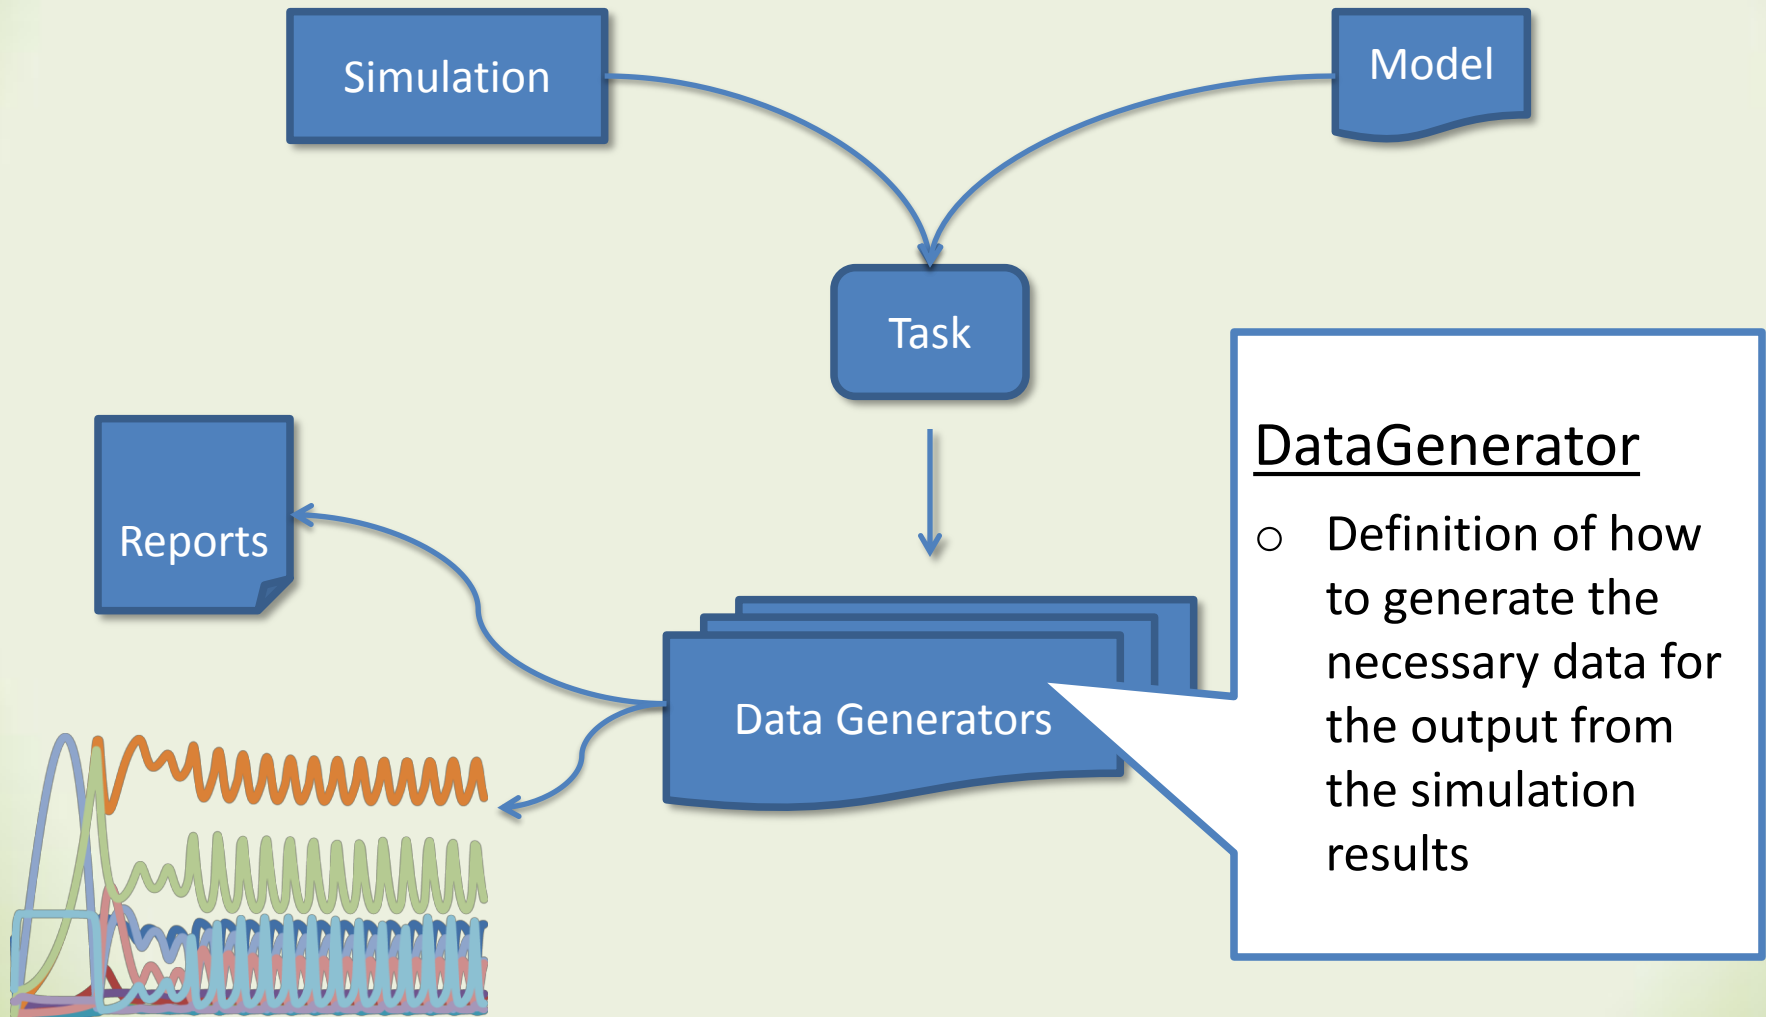

Repeatable simulation experiments

Repeatable simulation experiments

Repeatable simulation experiments

SED-ML Main Concepts

- No description of the simulation results
- SBRML
- No description of the layout of the output curves

SED-ML

```
<?xml version="1.0" encoding="utf-8" ?>
- <sedML version="0.1" xmlns="http://www.biomodels.net/sed-ml" xmlns:math="http://www.w3.org/1998/Math/MathML">
  <notes>Changing a system from oscillation to chaos</notes>
  - <listOfSimulations>
    <uniformTimeCourse id="simulation1" algorithm="KiSAO:0000071" initialTime="0" outputStartTime="50"
      outputEndTime="1000" numberOfPoints="1000" />
  </listOfSimulations>
  - <listOfModels>
    <model id="model1" name="Circadian Oscillations" type="SBML"
      source="urn:miriam:biomodels.db:BIOMD0000000021" />
    - <model id="model2" name="Circadian Chaos" type="SBML" source="model1">
      - <listOfChanges>
        <changeAttribute target="/sbml:sbml/sbml:model/sbml:listOfParameters/sbml:parameter
          [@id='V_mT']/@value" newValue="0.28" />
        <changeAttribute target="/sbml:sbml/sbml:model/sbml:listOfParameters/sbml:parameter
          [@id='V_dT']/@value" newValue="4.8" />
      </listOfChanges>
    </model>
  </listOfModels>
  - <listOfTasks>

Outlook

- Nested Tasks
- More Simulation Experiments
- Advanced Post processing

A Simple Nested Simulation for SED-ML

Frank T. Bergmann (fbergman@u.washington.edu)

About this document

This document describes a simple nested Simulation Experiment for SED-ML [1] that is easy to implement and will help to broaden what SED-ML is able to encode. Currently, SED-ML effectively describes the exchange of time course simulation experiments. Through suggestions made at the Super Hackathon in New Zealand¹ last year, this general uniform time course simulation was extended, by applying different ranges to simulation experiments (Figure 1).

Figure 1: Extending Simulations Through Ranges (snippet from current proposed SED-ML object model²)

However, by directly applying these ranges to the *TimeCourse* simulation element (and other future simulation types), it will be arguably harder for the community to implement this standard. Currently available simulation tools do not have this functionality. Moreover, a custom implementation will be necessary for each simulation experiment encoded this way. Here, an alternative will be presented that will allow for the same functionality as the current proposal and, perhaps even more important, make it easy for developers to implement. It will also allow for the community to implement novel simulation experiments.
